

Employee Attrition Analysis – HR Summary

Purpose

The goal of this analysis was to identify patterns behind employee resignations and highlight areas where HR can take proactive steps to improve retention.

Observations

Departments with Higher Employee Turnover

- The Sales department showed the highest attrition rate (approximately 21%).
- Human Resources also experienced relatively high employee turnover.
- Research & Development had the lowest attrition rate among the major departments.

Job Roles Most Affected

- Sales Representatives had the highest attrition rate, with nearly 40% leaving the organization.
- Laboratory Technicians also showed a significantly higher tendency to resign.
- Managerial and Director-level roles had much lower turnover rates.

Workload and Work-Life Balance

- Employees who worked overtime were more likely to leave the company.
- Attrition was noticeably higher among employees reporting lower work-life balance.
- These findings suggest that workload management may play an important role in employee retention.

Compensation Trends

- Employees who left the organization generally had lower monthly incomes compared to those who stayed.
- While salary is not the only factor affecting turnover, compensation appears to influence retention, particularly among early-career employees.

Employee Experience and Tenure

- Employees with fewer years at the company were more likely to resign.
 - Attrition decreased among employees who had spent longer periods with the organization, indicating that retention efforts should focus on newer employees.
-

Recommended HR Actions

1. Focus on High-Risk Roles

Provide additional support, mentoring, and career development opportunities for:

- Sales Representatives
- Laboratory Technicians

2. Review Overtime Practices

- Monitor employee workload regularly.
- Reduce excessive overtime where possible.
- Encourage healthier work-life balance across teams.

3. Strengthen Early-Career Retention

- Improve onboarding programs.
- Conduct regular check-ins during the first few years of employment.
- Create clear career growth pathways.

4. Evaluate Compensation and Recognition

- Review salary competitiveness for high-turnover roles.
 - Introduce recognition and reward programs to improve employee engagement.
-

Conclusion

The analysis indicates that employee turnover is primarily associated with workload, business travel requirements, job role, compensation, and length of service. By focusing on these areas, HR can improve employee satisfaction, reduce attrition, and retain valuable talent more effectively. The findings provide practical guidance for building a more stable and engaged workforce.
